

Gerbera

Installation de Gerbera

(Référence: <http://docs.gerbera.io/en/latest/daemon.html>)

```
sudo add-apt-repository ppa:stephenczetty/gerbera-updates
```

```
curl -fsSL https://gerbera.jfrog.io/artifactory/api/gpg/key/public | sudo apt-key  
add -
```

```
sudo apt install libebml5 libmatroska7 libpugixmlv5 libwavpack1
```

```
sudo apt install gerbera_1.12.1-jammy1_amd64.deb
```

```
id -u gerbera
```

```
sudo systemctl status gerbera
```

```
sudo chown -Rv gerbera:gerbera /var/lib/gerbera
```

```
sudo nano /etc/gerbera/config.xml
```

Vérifier les ajustements pour l'interface ainsi que l'utilisation de l'UTF-8 pour l'affichage correct des caractères accentués:

```
...  
<ui enabled="yes" show-tooltips="yes"> <accounts enabled="no" session-  
timeout="30"> <account user="gerbera" password="gerbera"/> </accounts> </ui>
```

...

...

```
<import hidden-files="no"> <filesystem-charset>"UTF-8"</filesystem-charset>  
<metadata-charset>"UTF-8"</metadata-charset> <playlist-charset>"UTF-8"</playlist-  
charset>
```

...

...

```
<server>  
<ui enabled="yes" show-tooltips="yes">  
<accounts enabled="no" session-timeout="30">  
<account user="gerbera" password="gerbera"/>  
</accounts>  
</ui>  
<interface>enol</interface>  
<port>49152</port>  
<!--<ip>192.168.0.2</ip>-->  
<name>gerbera</name>  
<udn>uuid:95c6497b-5ae2-4474-9b93-6e011ebec639</udn>  
<home>/var/lib/gerbera</home>  
<webroot>/usr/share/gerbera/web</webroot>  
<!--  
How frequently (in seconds) to send ssdp:alive advertisements.  
Minimum alive value accepted is: 62
```

The advertisement will be sent every $(A/2)-30$ seconds, and will have a cache-control max-age of A where A is the value configured here. Ex: A value of 62 will result in an SSDP advertisement being sent every second.

-->

```
<alive>1800</alive>  
<storage>  
<sqlite3 enabled="yes">  
<database-file>gerbera.db</database-file>  
<on-error>restore</on-error>  
</sqlite3>  
<mysql enabled="no">  
<host>localhost</host>  
<username>gerbera</username>  
<database>gerbera</database>
```

```
</mysql>  
</storage>  
...
```

```
sudo chown -Rv gerbera:gerbera /etc/gerbera
```

```
cd /etc/systemd/system/
```

```
sudo nano gerbera.service
```

```
[Unit]  
Description=Gerbera upnp server Daemon  
After=network-online.target  
  
[Service]  
Type=simple  
User=gerbera  
Group=gerbera  
#Group=sambashare  
#UMask=007  
ExecStart=/usr/bin/gerbera -c /etc/gerbera/config.xml  
TimeoutStartSec=0  
RemainAfterExit=yes  
Restart=on-failure  
  
# Configures the time to wait before service is stopped forcefully.  
TimeoutStopSec=300  
  
[Install]  
WantedBy=multi-user.target
```

```
sudo chmod 664 /etc/systemd/system/gerbera.service
```

```
sudo systemctl daemon-reload
```

```
sudo systemctl enable gerbera
```

```
sudo service gerbera restart
```
